Lab-01

Scheduling Algorithms

- CPU has many processes running at a time.
- Need to time share between them.

First Come First Serve

PROCESS	BURST TIME
P1	21
P2	3
P3	6
P4	2

The average waiting time will be = (0 + 21 + 24 + 30)/4 = 18.75 ms

0 p1 21 p2 24 p3 30 p4 32

P1	P2	P3	P4

0   21   24   30   32

This is the GANTT chart for the above processes

Shortest Job First

| PROCESS	BURST TIME
P1	21
P2	3
P3	6
P4	2

In Shortest Job First Scheduling, the shortest Process is executed first.

Hence the GANTT chart will be following :

0 p4 2 p2 5 p3 11 p1 32

P4	P2	P3	P1

0   2   5   11   32

Now, the average waiting time will be = (0 + 2 + 5 + 11)/4 = 4.5 ms

Priority Scheduling

PROCESS	BURST TIME	PRIORITY
P1	21	2
P2	3	1
P3	6	4
P4	2	3

The GANTT chart for following processes based on Priority scheduling will be,

P2	P1	P4	P3

0　　　3　　　　　　　　　　　　　24　　26　　　　　　32

The average waiting time will be, (0 + 3 + 24 + 26)/4 = 13.25 ms

Round Robin

PROCESS	BURST TIME
P1	21
P2	3
P3	6
P4	2

Here, Quantam = 5

The GANTT chart for round robin scheduling will be,

P1	P2	P3	P4	P1	P3	P1	P1	P1

0   5   8   13   15   20 21   26   31 32

The average waiting time will be, 11 ms.
